

THE IMPACTS OF CLIMATE CHANGE IN ONTARIO'S MINING SECTOR

An Introductory Course

Speakers

Al Douglas

Roger Rempel

Joel Nodelman

Presented by:

Course Abstract

This half-day training course will introduce participants to the topic of climate change, offer an overview of climate trends and projections, and describe the implications of a changing climate for the mining sector through diverse perspectives, including, investment; environmental assessment; asset and risk management; financial planning; and legal liability. Participants will gain knowledge of frameworks and tools that can be applied to assess and manage climate risks in mine operations and planning and identify solutions to improve climate resiliency.
